

# Budgeting for sustainable growth in the European Commission

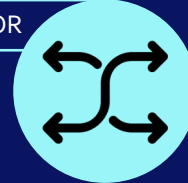

SERVICE

Green Finance

SECTOR

Cross-sectoral

REGION

Europe

## CHALLENGE

- Wanted to ground the European Commission's MFF (Multiannual Financial Framework) in economic evidence
- Needed a structured review of available sources to develop a bespoke economic model to feed into the MFF budgeting and allocations process

## ACTIONS

- Analysed key resources available to construct the economic model and disambiguated European Commission terminology
- Categorised each model by time horizon, methodology used, key indicators and cross-comparability
- Profiled the characteristics of each model to enable rapid and robust construction of a bespoke economic analysis tool
- Populated a database with source key information, modelling assumptions and input-output results

## RESULT

- The client was able to rapidly assimilate primary source data to determine the viability of their approach
- The client built an economic assessment model for the European Commission to inform its next MFF round
